

MTD Interior & Exterior Faux Stone

Spots and spills should be promptly cleaned with a mild soap solution and rinsed with fresh water. Clean the entire surface to avoid water marks. Stone tops are manufactured with oleophobic and hydrophobic sealers. For additional protection from stains, stone table tops are offered with an optional Honed surface. Honed Tops are recommended for high use areas. They are smoother and glossier than standard stone finishes. While Honed Tops add protection, this treatment does not prevent staining. An occasional application of clear paste wax will maintain the stain resistant qualities of a Honed Stone Top. Stone products will withstand decades of use when treated with care. Protect your stone furniture from abrasion and hard impact.
